Tricolor Dragon Plant (Dracaena Marginata var 'Tricolor')

If history—okay, maybe not *actual* history, but movies and comic books, for sure—has taught us anything, it's that dragons are usually something you want to avoid. But not Tricolor Dragon Plant (Dracaena Marginata var 'Tricolor'). This dragon is the kind you want to seek out, befriend, and bring home to meet your loved ones.

Talk about a specimen plant! The Tricolor Dragon's slender, sinewy, silver-gray canes, which often wind like hypnotized snakes, are one thing. But then you get to the spiky tufts of leaves at the end of each cane and things get downright wild. Tricolor Dragon Plant's leaves aren't just impossibly pointy—less than 1" wide, but often more than 16" long—they also seem to be every color *except* plain old green. Their centers are ivory. Then come stripes of dark, blackish green. And the edges? Bright magenta. It's stunning. It's bold. It's actually pretty gaudy ... and it's fantastic. We bet you'll love it as much as we do.

Best of all, Tricolor Dragon Plant is nearly as tough as a real dragon and pairs its outrageous looks with surprisingly modest needs. It tolerates a wide range of lighting conditions, from bright indirect—maybe even a touch of direct sun—to medium, even medium-low light. It does appreciate being spoiled with fluoride-free water (easily done—see Plant Care, below), and regular misting, but it isn't fussy about soil or fertilizer, and has few pest problems. Finally, unlike a real dragon, Tricolor is incredibly easy to manage, train, and propagate.
